## MP1

Due 11:59 pm Thursday August 29. Submit to the assign server, not to blackboard.

Check back on Monday Aug. 26 for updates. I will post some example test scripts.

Also, read the ECE 223 Programming Guide.

8/24: See the attached template for lab1.c and wifilist.h. You must use these templates because they define the input and output we require for automated grading. Note I changed a small detail of the MP: now the list size is input as a command line argument instead of collected as the first input from the user. The lab1.c template implements the correct format.

8/25: See attached template, testinput, for the start to a test plan. Run with `./lab1 3 < testinput > testoutput`
